

Lab week 9 (ISYS2120 sem2 2022)

Welcome to week 9's lab. This week we are going to adjust the groups, to be ready to start Asst3. The rest of the time is to do the first steps on the assignment..

A. Group adjustment for Asst3

In week 9 lab, you should form a group. It is common for people to stay with the group they had joined in Asst2, but it is not necessary. There will be separate Canvas groups for this assessment; we will initialize them as copies of what were formed for asst2, but membership can change as described below. If any student wishes to not be with their asst2 team, they can simply remove themselves from the initial group; this should also be done if you were in a group from a class that you will not be attending in future. The lab demonstrator will then work with anyone who is unassigned, to form groups properly. If necessary, the demonstrator or coordinator may also rearrange group membership. Make sure you know how to communicate with one another, and arrange a time for your first group meeting!

B. Initial steps for asst3

Please read the asst3 instructions carefully. During lab, you need to decide who will be the data owner, and you should also decide which group of functionalities each person will be doing. The data owner needs to use pgadmin and grant appropriate permissions for each member, to access the data tables in the shared dataset. Any remaining time can be used to start writing your SQL queries, which you will need to show for week 10 progress.

Before the end of the week

Before Sunday October 9, you need to finish the assessments that are due (SQL Task 16; Quiz9).

Next week there are no labs due to NTEU industrial action; please make sure, before the usual; lab time, that you upload the material needed to show week 10 individual progress, as described in the asst3 instructions. Also devote time to group coordination on the planning of your report, and doing the group aspects.
