# Not-Lab week 3 (ISYS2120 sem2 2022)

In respect for NTEU Industrial action (strike) on Wednesday August 17, there will be no labs held in week 3. Instead, we offer some activities for students to work on themselves, and discuss on the Ed discussion board.

Before the time when your lab was scheduled, please do the individual work for the week 3 progress check of Asst 1 (get 4 of the situations from the list given in the instructions, and upload to Canvas your answers as to whether each of these four situations is prevented according to the ER diagram, or whether it is allowed).

This week we are going to focus on creating tables.

A. Creating tables based on the ER diagrams
Look at the following ER diagram (using the notation from lectures, also used by the book Bernstein-Lewis-Kifer) produce SQL CREATE TABLE commands (including constraints) to correspond to the ER diagram.

See the week 3 lecture slides for the process to follow.

Before the end of the week
Before Sunday August 21, you need to finish the assessments that are due(SQL Tasks 4,5 and 6; Quiz3). Also, please make sure you meet with your Asst1 group, and then you need to do the "Week 4 progress work" from Asst 1, as an individual, to bring to your lab in week 4 (to show for feedback, and as evidence so you will get your individual contribution mark from this assignment).
